for cell agglutination (lectin activity). It binds to beta-D-

galactopyranoside moieties.

C. -- GATALYTITY. ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        specific adenosine on the 28S TRNA.
SUBUNIT: Disulfide-linked dimer of A and B chains.
DOMAIN: THE B chain is composed of two domains, each domain consists of 3 homologue subdomains (alpha, beta, gamma).
PTM: THE MAJOR A-CHAIN IS GLYCOSYLATED ONLY IN POSITION 45 AND THE MINOR A-CHAIN IS GLYCOSYLATED ALSO IN POSITION 271.
SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN PAMILY: TYPE 2 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -ray structure of recombinant ricin A-chain at 1.8-A resolution."; Mol. Bur. J. Blochem. 105.433-459(1980).

-! CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28s rRNA.

-! SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN PAMILY. TYPE 2 RIP SUBFAMILY.

-! SIMILARITY: Contains 2 ricin B-type lectin domains.
                                                                                2 IFPKQYPIINFTTAGATVOSYTNFIRAVRGRLT------VLPNRVGLPINORFILV

"Preproabrin: genomic cloning, characterisation and the expression of the A-chain in Escherichia coli.";

Eur. J. Biochem. 198:723-732 (1991).

STYTHERSIS THROUGH THE ACTALYTIC INCCTIVATION OF 60S RIBOSOMAL STYLESIS THROUGH THE CATALYTIC INCCTIVATION OF 60S RIBOSOMAL SUBUNITS BY REMOVING ADRINE FROM POSITION 4,324 OF 28 SRNA. THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT PRECEDES ENDOCYTOSIS.

CHAIN IS A GALACTOSE-SPECIFIC LECTIN THAT FACILITATES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT PRECEDES ENDOCYTOSIS.

CHICALLY CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S FRNA.

CHICALLY THE B CHAIN IS COMPOSED OF TWO DOWAINS, EACH DOWAIN CONSISTS OF 3 HOWOLGOUS SUBDOMAINS, EACH DOWAIN.

CHICAL STRILLARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.

--- SUBUNIT: DISULFIDE-LINKED DIMER OF AND B CHAINS.
--- DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN CONSISTS OF 3 HOMOLOGUS SUBDOMAINS (ALPHA, BETA, GAMMA).
--- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY. TYPE 2 RIP SUBFAMILY.
--- SIMILARITY: Contains 2 ricin B-type lectin domains.
                                                                                                        MEDLINE=93169023; PubMed=7763422;

"Crystal structure of abrin of 608 RIBOSONAL STRUCTION: THE B CALININ ERON POSITION 0F 608 RIBOSONAL STRUCTION: THE B CALININ IS A GALACTOSE-SPECIFIC LECTIN THAT FACILITARES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT FACILITARES THE BINDING OF ABRIN TO THE CELL MEMBRANE THAT PROCEEDES ENDOCYTOSIS.

-I- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 288 FRNA.

-I- DOMAIN: THE B CHAIN IS COMPOSED OF TWO DOMAINS, EACH DOMAIN CONSISTS OF 3 HOMOLOGOUS SUBDOMALNS (ALPHA, BETA, GAAMA).

"Complete amino acid sequence of luffin-b, a ribosome-inactivating
protein trons spong gourd (Luffa cylindrica) seeds.";

Agric. Biol. Chem. 55:229-28(1991).

-! CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
specific adenosine on the 28S rRNA.

-! SIMILARITY: BLOONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.

TYPE I RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                      (EC 3.2.2.22).

"Cloning and analysis of a cDNA coding a putative ribosome-
inactivating protein from Cucumis figarei.";

Plant Biotechnol. 17:337-340(2000)

-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
specific adenosine on the 28S rRNA.

-!- SIMILARITY: BELOWGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.

TYPE I RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        10 INFTTAGATVQSYTNFIRAVRGRLTVLPNRVGLPI------NQRFILVELSNHAELSVT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63 LALDVINAYVVGYRAGNSAYFFHPDNQEDAEAITHLFTDVQNRYTFAFGGNYDRLEQLAG 122                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                84
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ortigao M., Better M.;
"Momordin II, a ribosome inactivating protein from Momordica
balsamina, is homologome inactivating proteins.";
Nucleic Acids Res. 20:4662-4662(1992).
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28s rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
TYPE I RIP SUBFAMILY. molecular cloning of cinnamomin A-, B-chain and the expression,
purification, characterization and mutagenesis of the A-Chain.";
Submitted (SEP-2000) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ENDOHYDROLYSIS OF THE N-GLYCOSIDIC BOND AT ONE
SPECIFIC ADENOSINE ON THE 28S RRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.

                                         Modifying the ability of a proteinaceous composition to induce a toxi effect for reducing vascular leak syndrome, comprises identifying at least one specified amino acid sequence and altering it
                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                             The specification describes a method for producing immunotoxins and cytokines with a reduced ability to promote vascular leak syndrome (VLS). The immunotoxins are useful for treating graft versus host disease, non-Hodgkin's and Hodgkin's lymphoma, myeloma, metastatic lesson tumours and some type of solid tumours. The present sequence represents an immunotoxin (ricin toxin A chain) which induces VLS. The VLS-inducing motif can be mutated or deleted so that VLS is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Type II ribosome-inactivating protein; type II RIP; gelonin; momordin; immunoconjugate; autoimmune disease; cell killing; toxin.

                                                                                                                                                                                                                                                                                                                                                                                                                          62
                                                                                      The invention covers analogues of Type I RIPs. Ricin is a Type II RIP whose A chain is homologous to plant type I RIPs. The analogues of the invention have a cysteine available for intermolecular disulphide bonding at an amino acid position corresp. to a position not naturally available for bonding; the cys residue is located in the C-terminal region of the analogue between a position corresp. to amino acid 251 and the C-terminus of ricin A chain. The analogues pref. joined via a disulphide linkage to a molecule which specifically binds to a traget cell, e.g. an antibody fragment. (Updated on 09-JAM-2003 to acorrect PN field.)
                                                                                                                                                                                                                                                                                                                                                                                    3 PKQYPIINFTTAGATVQSYTNFIRAVRGRLTTGADVRHEIPVLPNRVGLPINQRFILVEL

                                                                               AAR63902 is the ricin A chain gene product, it is analogous to the ribosome-inactivating proteins (RIPS) described in AAR63903-R63911.

RIPS are the key components of cytotoxic therapeutic agents (GTAS), which include gene fusion products and immunoconjugates. CTAS may be used to selectively eliminate any cell type to which a RIP component is targetted, by the specific binding capacity of the second component of the agent. They can be used in the treatment of diseases where the elimination of a particular cell type is
                                                                                                                                                                                                                             desired, such as autoimmune disease, cancer and graft-versus-host
                                                                                                                                                                                                                                                                                                                                                                            0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0 x 2 x 5 x 6
                                                                                                                                        AAW25136 represents a Ricin A-chain ribosome inhibitory protein (RIP)
Which was engineered to contain a selectively removable internal peptide
linker sequence separating the alpha and betea units of the RIP. When
separated the two units regain activity and are capable of inactivating
enkaryotic ribosomes and hence preventing protein production. Many
different RIPS may be produced with an internal linker including
maize RIP, Trichosanthin, Ricin A-chain, Abrin-A A-chain and
Saporin. The RIPs can be used in the construction of therapeutic
toxins targeted to specific cells such as tumour cells via the
attachment of a targeting polypeptide, e.g. a monoclonal antibody.
A further use is in HIV therapy (see US4869903). There is interest
in expressing RIP recombinantly in host eukaryotic cells, because of
the capacity to provide correct post-translational processing. However,
RIPs effectively inhibit protein synthesis in eukaryotic cells resulting
entaryotic cells, they can be recombinantly expressed in such cells and
then converted to active RIP proteins
cup delideath and active RIP proteins.

The sequences given in AAW21698-710 represent Ribosome Inactivating Proteins (RIP's), which may be used in the construction of the proteins (RIP's), which may be used in the construction of the proRIP has a selectively removable, internal peptide linker. The proRIP has a selectively removable, internal peptide linker. The precursor sequence is incapable of inactivating eukaryotic ribosomes, but can be converted by removal of the linker into a protein having alpha and beta fragments and being capable of inactivating eukaryotic ribosomes. RIPs are potent inhibitors of eukaryotic protein synthesis. They possess a highly specific N-glycosidaes activity which cleaves the glycosidic bond of adenine 4324 of rat liver ribosomal 288 RNA. RIP's selectively inhibit cellular proliferation of cells, e.g. cancer cells and HIV-infected T cells. The inactive proRIP proteins make it possible to provide protein possible. The RIP can be used to make cytotoxic conjugates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  147 YDRLEQLAGNLRENIELGNGPLEEAISALYYYSTGGTQLPTLARSFIICIQMISEAARFO 206

The full-length sequences encoding ricin A (AAN70520), ricin D (AAN70525), putative ricin E (AAN70526) and RCA (AAN70524) in precursor form were obtch using messenger RNA to obtain a cDNA library, and then probing the library to retrieve the desired cDNA inserts. The library was probed using the 35-mer given in AAN70514. Figure 4 (see AAN70520, AAN70522) shows the nucleotide sequences of three plasmids contg. cDNA inserts obtd. by probing a cDNA library for sequences encoding ricin B using the probe in AAN70517. The cDNA inserts can be placed into expression vectors. Site-directed mutagenesis may be used to place an AFG start codon and a HindIII site at the beginning of the mature protein (see AAN70518). The coding sequences of the inserts can be ligated into expression vectors contg. the PhoA promoter-operator and leader sequence (AAN70523) and suitable retroregulators.

The immunotoxin given in AAR70827 comprises the heavy and light chain variable regions of anti-lens epithelium IgG3 MAb 4197X linked to ricin-A and a hexa-histidine tag. The DNA construct encoding the immunotoxin was expressed from pHB19 in E. coli. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

AAN90068) found on the EcoRI-HindIII fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of DNA from Ricinu communis, Zamibariensis variety. Patent discloses many modifications of ricin in which the lectin binding function of the B chain is diminished or removed, and conjugation to toxins to eliminate cell binding.

cells, but non-toxic to uninfected cells. The invention has anti-HIV and rurucide activities. The agent is able to enter all HIV susceptible cells, and not just cells known to act as host cells for the virus. The antiviral agent remains inert in a cell unless the cell is infected with the HIV virus, where the viral protease activates it. Ricin's enhancement of binding of the antiviral agent to galactose residues on cell surfaces, and its cellular internalisation. The invention is useful infections, especially retroviral infections. The antiviral agent is activated in viral particles or early-stage infected cells, killing the cells upon infection and effectively preventing the integration of the problem of the problem and effectively preventing the latency/rebound problem.

The full length sequences encoding ricin A (AAN70520), ricin D (AAN70525) putative ricin E (AAN70526) and RCA (AAN70525) putative ricin E (AAN70526) and RCA (AAN70524) in precursor form were obtained, using the messenger RNA to obtain a cDNA library, and then probing the library to retrieve the desired cDNA inserts. The Library was probed using the 35-mer given in AAN70514. Figure 4 (see AAN70521), AAN70521), Shows the nucleotide sequences of three plasmids containing cDNA inserts obtained by probing a cDNA library for sequences encoding ricin B using the probe in AAN70517. The cDNA inserts can be placed into expression vectors. Site-directed mutagenesis may be used to place an ATG start codon and a HindIII site at the beginning of the mature protein, (see AAN70518). The coding sequences of the inserts can be ligated into expression vectors containing the PDNA promoter-operator and leader sequence (AAN70533) and sultable retroregulators.

This polypeptide comprises the castorbean cytotoxin, ricin.

DNA (see AAT91638) encoding the enzymatic A domain and a portion of the A-to-B linker peptide of ricin was used to construct a ricin-diphtheria toxin B-interleukin-2 gene that was expressed in ricin-diphtheria toxin B-interleukin-2 gene that was expressed in E. coli. The hybrid protein can be isolated and used to treat conditions involving over-production of cells bearing IL2 receptors, such as certain 7-cell lymphomas and organ transplant rejection crises. The hybrid inactivates ribosomes in cells bearing IL2 receptors, resulting in cessation of protein synthesis and death of target cells. Claimed hybrid proteins comprise a translocation of comain and a cell binding domain from e.g. a hormone, growth factor or polypeptide toxin. The hybrid molecules can be used for the delivery of agents (e.g. therapeutic genes toxins, detectable cor polypeptide toxin. The hybrid molecules can be used for the targeted cells. The use of a translocation mechanism ensures that the hybrid will be effective in relatively low doses, since a high proportion of the substance of interest will be taken into the targeted cells. The hybrid molecules can be manufactured as a high broportion of the substance of interest will be taken into the targeted cells. The hybrid molecules can be manufactured as a high broportion of the precise control of composition.

Consistency, and the precise control of composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       38 PKQYPIINFTTAGATVQSYTNFIRAVRGRLTTGADVRHEIPVLPNRVGLPINQRFILVEL 97

```

The invention relates to a recombinant DNA molecule encoding a hybrid protein comprising three parts: (a) the first part comprises a portion of the binding domain of a cell-binding polypeptide ligand allowing the hybrid protein to bind to an animal cell; (b) the second part comprises a portion of a translocation domain of a naturally occurring protein cours, bridge-like toxin, pertussis toxin and tetanus coxin, which translocate the third part of the across the cytoplasmic coxin, which translocate the third part of the across the cytoplasmic commitment into the cytosol of the cell; and (c) the third part comprises a polypeptide entity to be introduced into the cell, which is non-native to the naturally occurring protein of (b). This sequence represents the castor bean ricin toxin sequence for use in generating the hybrid of the invention. The hybrid molecule enables the direction properly and convention of the hybrid is sepecially used in treating calleviate or cure the disease. The hybrid is sepecially used in treating cupylying the missing function, to supplementing celluar levels of a particular enzyme or a scarce precursor or cofactor, to directing toxins or other poisons to destroy particular cells (such as adipocytes, cancer cell, or virus infected-cells), to counteracting viral infections such as cell, or viral proteins or viral proteins. It is also detectable labels into cells.
